

FC12QE, FC16QE, FC24QE Procedure / How to Joint Carrier Tapes

<p>1. Cut the end of the carrier tape on the feeder side. (Carrier tape A)</p> 	<p>5. Stick the carrier tapes which caulked to the end of a positioning guide.</p> <p>In case of splicing carrier tapes by only joint tape, See Remarks</p> 															
<p>2. Cut the front of a new carrier tape. (Carrier tape B)</p> 	<p>6. Bend the Joint Tape along a bending line and stick it on feeding holes side.</p> 															
<p>3. Caulk Tape A and Tape B with a metal plate. (Ref. Procedure of Caulking)</p> <p>In case of splicing carrier tapes by only joint tape, See Remarks.</p> 	<p>7. Peel a positioning guide and a transparent tape</p> 															
<p>4. Peel a white cover of the joint tape up to a positioning guide.</p> 	<p>8. All Completed.</p> <p>**Be sure a black tape sticks completely to the carrier tape.</p> 															
<p>Remarks: Procedure splicing without Metal Plate At first, Set a Carrier tape A on a positioning guide, and stick the cover tape downward on the center of Joint Tape. And then, stick a carrier tape B setting it on a positioning guide and setting its cut end on a carrier tape A.</p>
